Letter of recommendation

To whom it may concern,

Dawid Czarnecki and his team at Zigrin Security carried out several penetration tests for our software products. Unlike several other companies that have done tests on our software, Zigrin Security first tried to understand how our software is used and what it can do. Only then did they start the tests and therefore are able to reduce the number of false positive reports. Found issues are reported to the development teams immediately and the final reports contain precise and comprehensive instructions on how to reproduce the issues and suggestions on how to fix them. They are also familiar with modern technologies such as microservices running in Kubernetes and focus on issues specific to these environments as well. We at KNIME can highly recommend Zigrin Security.

Sincerely yours,

(Thorsten Meinl, Head of Engineering)
